

I am now a resident of Southwick Ma but I feel I will always be part of Russell Ma. I moved when I was told I had cancer and I realized it is too hard to fight such a terrible thing. I went up to Maine where they have a similar biomass and I was shock to find wood chips everywhere and I woke up and had all kinds of dust particle on my car. I then realized that would be going into my lungs. To me one of the things the biomass people say is it is similar to a wood stove but a wood stove only works in winter when the air quality is much better. These plants will work seven days a week 24 hours a day. I also found they were not financially effective or very efficient in making electricity, I would much rather spend my taxes on something that will be cleaner, healthier and gives you energy or teaches others how to be conservative. I want to thank you for your time and please think twice before you make the same mistakes they made back in the seventies when looking for alternative energy.
